## THE BIGGEST IRRIGATION RESERVOIRS

Of several great storage dams at present under construction by the reclamation service perhaps the most strikingly interesting are the three high masonry dams known as the Shoshone, the Pathfinder, and the Roosevelt. The highest of these, the one in fact that will be distinguished as the highest dam in the world, is being built in the canyon of the Shoshone river in northwestern Wyoming six miles west of the town of Cody, so named after Col. W. F. Cody, better known as "Buffalo Bill."

The Shoshone, or the Stinking Water river, as it was originally named, because of the occurrence along its course of springs giving off noxious gases, rises in northwestern Wyoming in the spurs of the eastern slope of the Great Continental Divide, known as the Absaroka and Shoshone ranges. The drainage basin of the river above the Shoshone dam is about 1300 square miles in extent, varies in altitude from 5000 to 12,000 feet, includes many high peaks within the Yellowstone National park, and is remarkable for its wild and rugged scenery. The region is one of heavy snowfall, is well timbered and, pursuant to the wise national policy of forest preservation, is included almost entirely within the great Yellowstone national forest.

Just below where the two main forks of the river join in a narrow and deep canyon, the almost perpendicular granite walls of which rise to a height of several hundred feet.

Through this gigantic crack in the solid rock the melting snows of the entire watershed just described find their only exit, carrying to waste during the annual flood season of a few weeks sufficient water to reclaim many thousands of acres of the desert lands of lower altitudes. Within this canyon, at a point of almost ideal natural advantages, is being molded the solid wedge of concrete which is to be known as the Shoshone dam.

The height of this towering structure when completed will be 325 feet from lowest foundation to crest, its length at the top from wall to wall of the canyon being about 200 feet, and its thickness at the base 108 feet. In plan the dam is of the arch type, wherein stability is secured by means of the form as well as the volume of the structure.

The apex of the arch being turned up stream to resist the pressure of the impounded waters, and the foundation and abutments literally dovetailed into the solid granite, the completed structure will form a concrete monolith of imposing proportions as well as tremendous strength and stability.

The Roosevelt Dam in Arizona. The Roosevelt dam will eclipse in magnitude of cubic contents all of the dams at present under construction by the reclamation service. It will

contain 330,000 cubic yards of masonry, or over six times more than the Pathfinder, and nearly five times as much as the Shoshone dam. Its height will be 280 feet from foundation, length on top 630 feet (or, including spillway bridges, 1080 feet), and its thickness at the base 165 feet. In plan, although built in the form of an arch, this structure differs from the Shoshone and Pathfinder dams in being of the gravity type, wherein mass alone is sufficient to secure stability.

The resulting reservoir will be the largest artificially formed lake in the world, a body of water 25 miles long, in places over two miles wide, with a storage capacity of 1,300,000 acre-feet and a maximum depth of over 220 feet.

### LARGE ANNAPOLIS CLASS.

Large Number of Cadets Will be Graduated from Naval Academy This Year.

Annapolis, Md., June 1.—The largest class that ever left the Annapolis Naval Academy at one time will be graduated this week, the commencement week exercises for the 200 midshipmen beginning today, with the official reception to the board of visitors.

During the next four days there will be the usual round of dress and practical exercises. Friday will be commencement day, and it is expected that Secretary Metcalf will deliver an address and present the diplomas to the graduates. On Saturday, the first, second and third classes will embark on the several ships of the cruising squadron for the annual winter cruise.

The class to be graduated will be the largest that ever left the institution at any one time before. It contains 200 members. The class of 1907 was larger by eight members than this year's class, but was graduated in three separate divisions, one section of 86 receiving its diplomas in September, 1906, a second section of 80 being graduated in February, 1907, while the last section of 72 was graduated at the regular time in June.

Making Concrete Tombstones.

The very latest application of cement-concrete tombstones has been reached Portland, and here as elsewhere, promises to become a well defined and profitable industry, says the Oregon Daily Journal. While the use

of concrete in the manufacture of tombstones seems rather a greivous one, still the ancients associated the tomb with the highest artistic impulse. In the eastern states the manufacture of concrete tombstones has already assumed the proportions of an important industry, so great is the economy of concrete. With concrete as the structural material there is no limit to the opportunity of the artist. Whether the concrete so molded as to make the ornamental features an integral part of the structure, or whether it be encrusted with terra cotta in subdued tones, the opportunity exists for the exercise of the best artistic talent. Designs formerly made in marble or granite can be readily reproduced in concrete and at considerably smaller cost.

**This Day and Time.**  
"Dis yer day an' time," said Brother Williams, "is too much for me. Ef dar wuz a Joshua livin' who could make de sun stan' still he do it so he could save on de gas bill, an' ef Jonah wuz livin' now an' a whale didn't have any mo' sense than ter swallow him he'd lan' dat whale high an' dry an' sell him ter de lie trust, an' ef Lot wuz turnin' long wid his wife an' she wuz turned into a pillar er salt he'd bull' a fence round her an' lect hisse' president er a salt trust! Hits de rushin'est, grab all age I ever wuz in. Dey not only rides de lightning, but dey done staked off de stars, an' dey knows dese how many hours a day de fireman in de sun works, an' dey is slick enough ter tie tin cans ter de tails of de comets what go blasin' round de sky! We is so wise on our own account dat wisdom itse'f looks foolish. Whar we'll fetch up I dunno. All I does know is dat we gwine fast enough ter make yo' head swim!"—Atlanta Constitution.

**Taking No Chances.**  
A farmer who took much pride in the looks of his fattening pigs once purchased a pair from a neighbor. Upon delivery at the usual age of eight weeks they seemed to him rather small.

Bying them dubiously, he remarked dryly, "Guess I had better keep the eat shut up for a few days."

**A Hard Stunt.**  
Mamma—Good gracious, Georgie! What is the matter with Freddie Jones? Is the child having a fit?  
Georgie—No, mamma. You know Freddie stutters, and we bet he couldn't say "altitudinosity" before Bobbie ran twice around the block.—Puck.

**Ponderous.**  
Evelyn—He's a very learned man. You wouldn't think so, would you?  
Narcie—Oh, yes! I suspected it at once.  
Evelyn—Indeed? Narcie—Yes. He makes me so tired.—Lily-trained Bits.

Great reduction in price on any trimmed hat, Friday and Saturday, at Campbell Millinery. Special sale on Merry Widow salons.

## MEEKER IN OREGON

### PIONEER TRAIL MARKER RETURNS TO THE WEST

After Traveling Over 4500 Miles by Ox Team During the Past Year and a Half, Ezra Meeker Visits Portland and Tells His Experiences—Outlook for National Highway Across the Continent Is Good.

The Oregon Daily Journal says of the return of Ezra Meeker, the pioneer trail marker to the northwest states and of his excellent work in the interest of a national highway across the continent.

Having addressed more than 100,000 school children, met the president in the White House and numerous other notables, and believing that the purpose of his trip along the old Oregon trail—to have congress build a concrete road across the continent—will eventually be a success, Ezra Meeker the pioneer, arrived in Portland this morning after having traveled more than 4500 miles by ox team in the last year and a half.

Mr. Meeker will remain in Portland for two weeks and will take part in the Pioneer's day celebration on June 10. The ox team and wagon and camp outfit are on their way to Portland, having been shipped from St. Joseph, Missouri, by train last week. While here Mr. Meeker will camp out on some lot in the city. This afternoon Mr. Meeker will consult Jacob Kamm, another old timer, to see if he can have the privilege of putting up his tent on one of Mr. McCam's lots near the business district.

Mr. Meeker says his trip has been a success in every way. The people everywhere, he says, were particularly glad to see him and welcomed him with open arms. In New York city, where Mr. Meeker remained two months, the aldermen passed a special ordinance allowing his ox team to appear on the streets of America's metropolis.

Since he left the coats in January, 1906, Mr. Meeker has lived in the open most of the time, and visited most of the principal cities of the country. As a result, he is still "77 years young," as he puts it himself. While away one of the oxen died but the other still remains in service. The mate was taken from the stockyards at Omaha and has since traveled more than 3000 miles, dragging the prairie schooner and driver all those miles.

For the present Mr. Meeker is staying at the Perkins. The ox team will arrive within a few days and will appear on the streets of Portland. At The Dalles they will be unloaded from the freight car and driven to Portland by Mr. Meeker himself, who will go there to meet them.
